- 1) Lower limit of the comfort range down to which a sleeping bag user with a relaxed posture such as lying on the back is globally in equilibrium an just not feeling cold (related to standard woman and in standard condition of use)
- 2) Lower limit of which a sleeping bag user with a rolled-up body posture is globally in thermal equilibrium and just not feeling cold (related to standard man and in standard conditions of use)
- 3) Lower extreme temperature where the risk of health damage by hypothermia occures (related to standard woman and in standard conditions of use)
- Upper limit of comfort range; the temperature up to which a partially uncovered sleeping bag user (standard man) just does not perspire too much
